

PINEAPPLE CONTRACTORS

M7 MOBILE MASTER

The whole operating system — incl. the 19-step Command Deck

Built 2026-06-22 · Frisco / North Texas · 972-928-0788

The Pineapple Standard · IKO Certified · RCAT #03-0637 · CPPA

Ko e hala 'o e fononga ko e faka'apa'apa.

❑ PINEAPPLE CONTRACTORS M7 — MOBILE MASTER

Your whole operating system in one read-through. Built 2026-06-22 for phone review. Brand standard: The Pineapple Standard · IKO Certified · CPPA (never "free") · no green · phone 972-928-0788.

Snapshot for reading on the go. Live source of truth = the Obsidian vault (Drive-synced). Edits — tell me or Hermes. Nothing here publishes or spends anything.

CONTENTS

1. Brand Constitution (GROUNDING)
2. Master Playbook
3. Master SOP — Command Deck (NotebookLM + Higgsfield, 19 steps) (new)
4. Integrated Campaign — Social + LSA + SEO/AEO
5. Agent Loops — the automation control panel
6. Lead Engine (speed-to-lead + reviews)
7. Growth Engine
8. Content Factory (39GB media to ads)
9. Marketing Audit (GBP/LSA/SEO/social)
10. Hermes — Start Here

PART 1 — GROUNDING.md

GROUNDING — THE PINEAPPLE CONTRACTORS M7 BRAND CONSTITUTION

This file is the immutable law every agent (Claude Code, Hermes, OpenClaw, NotebookLM, Antigravity) must read and obey before generating, mutating, or publishing anything. Deployed redundantly to the vault root and 03_Knowledge_Mat/. If a request conflicts with this constitution, generation is blocked.

1. VISUAL LAW

- Royal Navy #1A365D (alt #001122 / #001a33) — primary anchor, text, structure.
- Pineapple Gold #FBC02D (alt #FFD700 / #E5A93C) — action, highlights, CTAs.
- Process Status Cyan #00BFFF — status indicators only.
- White #FFFFFF — negative space.
- The color green — any green hex, RGBA, CSS named green, or Tailwind green class — is strictly prohibited and triggers a critical build failure (exit 1).
- Layout envelopes: Top Banner 180px (Gold); Hook Font 42px; Wrap Envelope 860px; Bottom Credential Bar 95px (Navy).

2. ELITE LEXICON (mandatory mutations)

- "Free" / "Free Inspection" / "Free Quote" → "Complimentary Professional Photo Audit (CPPA)"
- "\$0 Down" / "\$0 Out of Pocket" → "Full Restoration Coverage"
- "Save Money" → "Protecting your family's investment"
- "Adjusters miss damage" → "Comprehensive documentation for a successful claim"
- "GAF Certified" → "IKO Certified (RCAT License #03-0637)"
- Aggressive/generic legacy naming → "The Pineapple Standard"
- Banned outright: "Free", "Warrior", "Toa", "Six Brothers", "Consultation".

3. HERITAGE ANCHORS

- Identity: Polynesian-owned, family-operated, serving North Texas since 2005.
- Principles: *Tauhi Vā* (honor shared spaces and relationships) and *Loto Tō* (humility, honest service).
- Heritage wisdom sign-off: "*Ko e hala 'o e fononga ko e faka'apa'apa*" (primary); "*Si'i pe kae ha'u*" (secondary).
- Voice: professional, authoritative, culturally rooted; no robotic corporate filler.

4. HIGH-VALUE METRICS

- Minimum project baseline: \$18,000+ (auto-reject below).
- Speed-to-lead: 5 minutes (older = dead).
- Lead matrix: +25 Frisco ZIP, +30 Property Manager, +20 \$700K+ estate, +20 storm mention; ≥80 → dispatch to Saia.
- Estimate validity: 7–14 days.

5. EXECUTION GUARDRAILS

- 1-3-12 Meta Offensive: 1 CBO (\$250/wk), 3 avatars, 12 creatives. 1% Kill / 1.5% Scale. CPL target \$50, max \$250.
- 50/5/3 video engine: 50s total, hook frames 0–15, end card frames 1411–1500.
- Advantage+ creative enhancements hardcoded OFF.
- OUTBOX SHIELD: all ad/web/social output written to `01_Command_Center/Outbox_Drafts/` in a PAUSED state. Live activation requires explicit human authorization. No agent may publish live or move money.

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 2 — MASTER_PLAYBOOK.md

PINEAPPLE CONTRACTORS M7 — AGENTIC OS MASTER PLAYBOOK

Single Source of Truth. All agents (Claude Code, Hermes, OpenClaw, NotebookLM workflows) MUST read this file and ground against it before executing any task. Do not deviate from these rules. Do not hallucinate data. Request human confirmation if a required variable is missing.

Root Pathway (immutable): C:\Pineapple Contractors M7\ The legacy C:\Pineapple-Mana-Global\ environment is decommissioned. No loose files in root. No directory drift.

CORE ARCHITECTURE & MAP

All agents, scripts, and workflows operate strictly inside the **4-Fala Topography** (the woven mat). The structure is immutable: any orphaned directory, legacy folder, or unmapped file is purged by housekeeping daemons to prevent context drift. Agents must verify this exact schema via Model Context Protocol (MCP) reads before issuing any write command.

```

```

Fala Functions (one line each):

- **01_Command_Center** — Immutable rulesets, brand constitution, dashboards, system prompts. External models are blocked from guessing brand logic; they read these files first.
- **02_Workspaces / 02_Media_Vault** — Active project execution, timeline assembly, and brand-compliant raw/compiled visual assets.
- **03_Knowledge_Mat** — Flattened, deduplicated markdown for low-latency RAG retrieval; raw input is flattened and mapped into `00_Atlas`.
- **04_Tech_Lab** — Localized sandbox for Python/Node modules, Docker runtimes, and MCP bridges. Zero unhandled exceptions permitted.
- **05_Campaign_Factory** — Strict Stage-Contract pipeline; work must meet programmatic criteria before advancing to the next directory.

FILE SPECIFICATION TABLE

Every generated or migrated file follows the strict `YYYY-MM-DD_Category_Topic` naming convention so automation scripts parse data cleanly. Anchor files in `01_Command_Center` are exempt (fixed names).

Folder Path	File Name	Operational Purpose
01_Command_Center/	MASTER_PLAYBOOK.md	Single source of truth rulebook (this file).
01_Command_Center/	tatafu.md	Brand core metrics, heritage rules, executive logic.
01_Command_Center/	GROUNDING.md	Brand constitution: banned lexicon, palette, file isolation laws.
01_Command_Center/	ANTIGRAVITY_OS.md	Master system execution prompt configurations.
01_Command_Center/	soul.md	Brand character bible for correct tonal persona.
01_Command_Center/	OS_Dashboard.html	Local single-page Mission Control interface.
01_Command_Center/ Outbox_Drafts/	YYYY-MM-DD_Outbox_Asset.md	Locked draft assets awaiting human authorization.
02_Workspaces/Active_Campaigns/	YYYY-MM-DD_Campaign_Brief.md	Active campaign staging and timeline assembly.
02_Media_Vault/	YEAR_MONTH_CAMPAIGN_ASSET-TYPE.*	Raw drone captures and compiled marketing reels.
03_Knowledge_Mat/00_Atlas/	YYYY-MM-DD_SOP_Onboarding.md	Active member onboarding parameters.
03_Knowledge_Mat/00_Atlas/	YYYY-MM-DD_FAQ_Community.md	Validated consumer answers database.
03_Knowledge_Mat/raw/	YYYY-MM-DD_Raw_Transcript.md	Unstructured ingestion prior to flattening.
04_Tech_Lab/Scripts/	YYYY-MM-DD_Script_Cleanup.py	Local execution and automated housekeeping.
04_Tech_Lab/Scripts/	brand_firewall.py	Production-grade compliance scanner (--fix , --report).
04_Tech_Lab/Scripts/	m7_scoring.py	Lead scoring + banned-word and readability gating.
05_Campaign_Factory/ 10_Research_Stage/	YYYY-MM-DD_Research_Intent.md	Extracted market intent and lead scoring.
05_Campaign_Factory/ 20_Copy_Drafting/	YYYY-MM-DD_Draft_Copy.md	Synthesized campaign copy and video scripts.
05_Campaign_Factory/ 30_Compliance_Audit/	YYYY-MM-DD_Audit_Report.md	Final validation against brand directives.

STAGE-CONTRACT CONTEXTS

Every core folder/room contains a `CONTEXT.md` defining the **Input** and **Output** criteria required for data to pass through that node. Data that fails its node contract is rejected and returned upstream.

01_Command_Center\CONTEXT.md

- **Input Criteria:** Authorized strategic updates from the Lead Systems Architect only.
- **Output Criteria:** Immutable, read-only `.md` rulesets for all local agents to ground against.

02_Workspaces\CONTEXT.md

- **Input Criteria:** Approved execution blueprints and active, authorized ad-spend budgets.
- **Output Criteria:** Compiled assets packaged for deployment via local automation or direct API.

02_Media_Vault\CONTEXT.md

- **Input Criteria:** Raw drone/field captures conforming to `YEAR_MONTH_CAMPAIGN_ASSET-TYPE`.
- **Output Criteria:** Brand-compliant imagery parsable by vision-language models without manual tagging.

03_Knowledge_Mat\CONTEXT.md

- **Input Criteria:** Unstructured transcripts, field data, and historical project debriefs.
- **Output Criteria:** Flattened, deduplicated markdown structured strictly for RAG querying.

04_Tech_Lab\CONTEXT.md

- **Input Criteria:** Verified MCPs and vetted Python/Node.js scripts.
- **Output Criteria:** Flawless terminal execution with zero unhandled exceptions.

05_Campaign_Factory\CONTEXT.md

- **10_Research_Stage** — INPUT: Raw Meta webhooks / live search data. OUTPUT: Scored intent profiles (`intent.json`).
- **20_Copy_Drafting** — INPUT: Scored intent profiles. OUTPUT: Unverified markdown copy blocks.
- **30_Compliance_Audit** — INPUT: Draft copy. OUTPUT: 100% brand-compliant text approved for distribution.

AUTOMATION READY CORE CONTENT

Flat, execution-ready procedures for direct consumption by local agents (Claude Code, OpenClaw, Hermes).

Brand Firewall — Visual Law

- Primary palette: Royal Navy `#1A365D` (alt `#001122` / `#001a33`) and Pineapple Gold `#FBC02D` (alt `#FFD700` / `#E5A93C`).
- Process status highlights: Cyan `#00BFFF` .
- Negative space: White `#FFFFFF` .
- The color green — including all green hex codes, RGBA variants, CSS named greens, and Tailwind green utility classes — is strictly prohibited. Any green reference returns a critical build failure (exit code 1).
- Strict layout envelopes: Top Banner = 180px (Pineapple Gold); Hook Font = 42px; Wrap Envelope = 860px; Bottom Credential Bar = 95px (Royal Navy).

Brand Firewall — Elite Lexicon (mandatory mutations)

- "Free" / "Free Inspection" / "Free Quote" → **"Complimentary Professional Photo Audit (CPPA)"**.
- "\$0 Down" / "\$0 Out of Pocket" → **"Full Restoration Coverage"** (also acceptable, non-rewritten: "Insurance-Covered Restoration").
- "Save Money" → **"Protecting your family's investment"**.
- "Adjusters miss damage" → **"Comprehensive documentation for a successful claim"**.
- "GAF Certified" → **"IKO Certified (RCAT License #03-0637)"**.
- Aggressive/generic legacy naming → **"The Pineapple Standard"**.
- All output passes the CLI mutation filter (regex pre-generation gate) before any file is committed to disk.

Heritage Anchors & Identity Core

- Identity: Polynesian-owned, family-operated, serving North Texas since 2005.

- Core principles: *Tauhi Vā* (sacred obligation to honor and protect shared spaces and relationships) and *Loto Tō* (humility and honest service).
- **Fā'i Kaveikoula (The Four Golden Pillars):** *Faka'apa'apa* (mutual respect), *Angafakatokilalo / Loto-tō* (humility, teachability), *Tauhi Vā* (nurturing relationships), *Mamahii me'a* (passion, loyalty, fierce dedication to execution).
- Major announcements and long-form copy close with a heritage wisdom anchor — primary: "*Ko e hala 'o e fononga ko e faka'apa'apa*" (the path of the journey is respect); secondary: "*Si'i pe kae ha'u*" (small but mighty).
- Voice: professional, authoritative, culturally rooted; no robotic corporate filler ("leverage", "synergize").

High-Value Project Metrics (The Pineapple Standard)

- Minimum baseline entry: **\$18,000+**. Projects below this are automatically rejected to protect margins.
- Speed-to-lead: leads contacted within **5 minutes**; any lead older than 5 minutes is classified dead.
- Estimate validity: strict **7-to-14-day** window to defend against material cost volatility.
- Lead Scoring Matrix (1–100): **+25** Frisco ZIPs, **+30** Property Managers, **+20** \$700K+ estates, **+20** explicit storm-damage mentions. Score **≥80** triggers immediate same-day dispatch alert to Saia.
- Tagging: Residential Gold (3,500+ sq ft / \$1M+ estates in 4.0"–4.75" hail swaths); Commercial Blue (40,000+ sq ft in 2.0"–2.5" swaths, targeting TPO/metal seam micro-fissures).

Lead Qualification Pipeline (The Elite Filter)

- Meta Instant Forms built with high friction to repel renters and low-intent prospects.
- Required fields: Name, Phone, Home Address, Age of Roof, Insurance Carrier, Claim Status.
- Boss-Level qualifiers: legal deed holder? (disqualify if No); roof age (1–5 / 6–10 / 10+); neighborhood storm impact in last 30 days?
- Infrastructure: Zapier deprecated. Webhooks route natively through local n8n → centralized Google Sheets → AI agents via MCP.

Digital Marketing Engine — 1-3-12 Meta Offensive

- **1 Campaign:** Centralized Campaign Budget Optimization (CBO) starting at \$250/week.
- **3 Ad Sets (avatars):** The Local Fan (Frisco 35–65 near The Star); The Culture Seeker (heritage/community honor, *Tauhi Vā*); The Founder's Circle (B2B commercial owners, property managers, hotel operators, high-equity investors).
- **12 Creatives:** Advantage+ Flex Media, rotating dynamically across the 3 content angles.
- **1% Kill Rule:** Deactivate (set PAUSED) any creative below 1.0% CTR after a 48-hour stabilization window or 1,000 impressions.
- **1.5% Scale Rule:** Scale budget weighting by 15% intervals for any creative above 1.5% CTR with CPL under \$50.
- **Cost metrics:** Target CPL < \$50; absolute maximum threshold \$250.
- **Advantage+ Override:** automated creative enhancements hardcoded OFF (no auto audio, contrast, or off-palette color injections).

Digital Marketing Engine — 50/5/3 Lego Video Engine

- Total runtime: exactly **50 seconds** (1500 frames @ 30fps).
- Disruptive hook: frames **0–15** (first 0.5s) — pattern interrupt matched to the local DFW avatar.
- Core body: frames **16–1410** — factual density, drone analytics, active restoration footage.

- End Card: exactly **3 seconds** (frames 1411–1500) — Pineapple Gold text on Royal Navy ground, explicit CTA + 972-928-0788.
- Terminology firewall (zero tolerance) on all overlays/audio: mutate banned hook phrasing per the Elite Lexicon above.

Copywriting Blueprint — PACT Framework

- **Problem identification** → **Anchor cultural context** (*Tauhi Vā* / heritage) → **Complimentary Professional Photo Audit** (CPPA) solution → **Trust-based call to action**.
- 1-3-12 angles map to: Heritage/Local focus · CPPA value · Premium material durability.
- Note on 50/5/3: two compatible readings — (a) runtime spec: 50s total, 5s hook, 3s end card; (b) production batch: 50 raw hooks, 5 narrative sequences, 3 CTAs. Both are sanctioned.

Content Angle Matrix

- **Angle 1 — The Deadline (Urgency):** 30-day Texas insurance claim window.
- **Angle 2 — The Dream Outcome:** stress-free claims via professional documentation (CPPA).
- **Angle 3 — Social Proof / Heritage:** legacy, 350+ families protected, 5-star ratings, 20+ years in North Texas.
- Hook–Value–CTA structure: 1–2 sentence scroll-stopper → 3–6 sentence offer/transformation → 1 frictionless CTA.
- "Hammer Them" retargeting: micro-budget campaigns serving testimonials to 30-day engagers.

Outbox Shield (Security Override — non-negotiable)

- Autonomous live publishing to Meta Ads, Google Ads, or live web is illegal under base prompt law.
- Every script, landing page, and post is written locally to `01_Command_Center/Outbox_Drafts/`.
- All campaign delivery variables are forcibly hardcoded to a `PAUSED` state on upload.
- Live activation requires explicit human authorization from an authorized operator. Human-in-the-loop is mandatory.

Local SEO / GEO Engine

- Shift from blue-link SEO to Generative Engine Optimization (GEO): be cited by AI search engines.
- Extreme factual density, nested H1/H2/H3 headers, clean tables, "Citation Bait" (original case studies, definitive answers).
- AEO mandate: answer the explicit query within the first 40 words; inject "RCAT Licensed #03-0637" and "IKO Certified"; tag ZIPs 75033, 75034, 75035 in schema arrays.

Regional Expansion Vectors

- Primary hub: 10-to-15 mile operational radius around Frisco, TX HQ (1 Cowboys Way, Ste 270W).
- Target ZIPs: 75033, 75034, 75035, 75067, 75068. Luxury enclaves: Starwood, Newman Village.
- Core DFW territories: Frisco, Lewisville, McKinney, Plano, Allen, The Colony, Castle Hills.
- Active expansion hub: Austin, TX (I-35 corridor). Staged vectors: Houston, San Antonio, West Palm Beach.
- **Rule of 100:** deploy exactly 100 physical touchpoints (A-frames, yard signs, mailers, door knocks) per activated ZIP.
- Rank Map Strategy: localized CPPA landing pages per high-value neighborhood to capture "Near Me" intent without spam-filter triggers.

Dual-Brand Architecture (Pineapple Standard)

Two distinct brands operate under the M7 OS. **Never cross-contaminate terminology between them.**

Brand A — Pineapple Roofing		Brand B — Pineapple Restorations
Domain	pineapplecontractors.com	pineapplerestorations.com
Scope	Estate & Commercial Portfolio Roofing, Thermal Shock, Hail	Fire Recovery, Water Mitigation, Mold Remediation, Biohazard
Primary Avatars	Frisco Multi-Unit Property Managers, Luxury Homeowners	Property Managers (emergency interior), Hotel Management
Primary Hook	Complimentary Professional Photo Audit (CPPA)	Emergency Rapid-Response Mitigation & Full-Scope Damage Documentation
Credential	IKO Certified (RCAT License #03-0637)	Same license; lead with emergency response SLA

Rule: Roofing terminology must never appear in Restorations workflows and vice versa. Separate ad sets, separate landing pages, separate campaign briefs.

Agentic Stack & Terminal Operations

- Orchestrator: Hermes (24/7 daemon via Docker + PM2) delegating to Claude Code over MCP.
- Knowledge graph: Obsidian local-first vault; bidirectional `[[links]]` ; version-controlled to GitHub.
- Local models: Ollama (DeepSeek V4, Gemma 4, Qwen 3.x) routed via LiteLLM proxy (`drop_params: true`).
- Key scripts: `m7_fetch.py` (clean competitor scrape), `m7_scoring.py` (lead + compliance gate), `video-multiplier.py` (FFmpeg 9:16 reels), `firecrawl_drone_audit.py` (CPPA dossier).
- Core CLI: `/goal` (persistent loop), `/loop` (scheduled recurrence), `/compact` (context compress), `/clear` (state wipe), `/vault` (force-sync Obsidian), `/export` (GitHub push).

EXTENDED KNOWLEDGE & TOOLING (linked SOPs)

The single source of truth references these detailed Atlas SOPs (merged from the NotebookLM/Gemini + agent-tooling playbooks):

- `03_Knowledge_Mat/00_Atlas/2026-06-17_SOP_AI_Knowledge_Architecture.md` — Three-Tier AI (Gemini Notebooks / NotebookLM 2.0 / Open NotebookLM), Gemini Gems PACT framework, GEO/AIO, Studio multimedia, QC checklist.
- `03_Knowledge_Mat/00_Atlas/2026-06-17_SOP_Agent_Tooling_Environments.md` — Claude Code vs Cursor vs VS Code, Aion UI multi-agent cowork, Hermes/Jarvis memory, OpenClaw, OMI ingestion, 64k-context fix.
- `03_Knowledge_Mat/00_Atlas/2026-06-18_SOP_Paperclip_Hermes_Empire.md` — Paperclip multi-agent company orchestration, Hermes daemon, cross-agent protocol.
- `03_Knowledge_Mat/00_Atlas/2026-06-19_SOP_YouTube_Analysis_Framework.md` — 8-prompt YouTube video extraction engine, four-agent production team, Protocol 0 persistent state.
- `03_Knowledge_Mat/00_Atlas/2026-06-19_SOP_Master_OS_Blueprint.md` — Architecture selection matrix, WhatsApp Cloud API integration, NotebookLM 3-phase deployment, Gemini modules, Fusion Protocol, SEO rank machine loop.
- `03_Knowledge_Mat/00_Atlas/2026-06-19_SOP_Video_Factory_Pipeline.md` — Google Flow AI video factory, multi-model crew routing, 3-panel Mission Control layout, NotebookLM AutoSync.
- `03_Knowledge_Mat/00_Atlas/2026-06-19_SOP_Local_Memory_Bridge.md` — Left Brain/Right Brain permission model, Obsidian vault init sequence, Ollama fallback config.

- 03_Knowledge_Mat/00_Atlas/2026-06-19_SOP_Obsidian_Interactive_OS.md — Obsidian as interactive OS: Dataview, Canvas dashboards, custom plugin build, config.md-driven UI.
- 01_Command_Center/ANTIGRAVITY_OS.md — the 5-Layer Orbit Grid (Capture → Vault → Intelligence → Command → Loop).
- 01_Command_Center/tasks/AGENTS.md — agent orchestration & state matrix.
- Raw source playbooks preserved in 03_Knowledge_Mat/raw/ (zero-loss).

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 3 — M7_MASTER_SOP_Command_Deck.md

□PLAYBOOK M7 — HERMES AI SUPER AGENT COMMAND DECK & OMNICHANNEL AUTOMATION WORKFLOW

The Unified 19-Step Master SOP · NotebookLM Research Engine + Higgsfield Creative Studio integrated

Objective

Run Pineapple Contractors as a one-person AI operating system. One voice command, one Kanban card, one approval click — and a swarm of background agents researches, writes, builds, clones, renders, checks, and stages the work for you. **You stay the only publisher, and the only one who spends.** Nothing goes live, sends, posts, renders paid credits, or moves money without your explicit go (the Outbox Shield). Brand law is non-negotiable everywhere below: **The Pineapple Standard** (never Toa/Warrior/Six Brothers), **IKO Certified** (never GAF), **CPPA** (never "free"), **Full Restoration Coverage** (never "\$0 down"), **no green**, phone **972-928-0788**.

How to read this: Phase 1 is your screen layout. Phase 2 is the assembly line. The 19 Steps are the build order — each has a plain-English **Process** and a ready **Prompt** you paste into Claude or Hermes.

□PHASE 1 — THE AI OPERATING SYSTEM COMMAND DECK ARCHITECTURE

Configure your interface (Hermes V0.17 Desktop App, or the M7 dashboard + Obsidian) into one unified workspace split into these dedicated bays:

Bay	What it is	Maps to in your vault
□Hermes Jarvis	Hands-free voice client, wake-word, macro execution	Hermes Agent window
□Agent Mastermind / Chat	Shared room where expert models debate + cross-critique	Hermes chat / Claude
□Idea Factory	The 5-column visual Kanban hub (auto-routing)	M7_Agent_Kanban.md + M7_Agent_Board.html
□SEO Room	Hub for the SEO Rank Machine + SEO Everywhere engines	M7_INTEGRATED_CAMPAIGN.md §5
		03_Knowledge_Mat/ + 02_Media_Vault/

Bay	What it is	Maps to in your vault
▣ Studio / NotebookLM + Higgsfield	Research + creative/cloning/video asset bay (profiles below)	
▣ Memory Galaxy (Obsidian Bridge)	Bidirectional read/write to your local Obsidian DB	the whole <code>C:\Pineapple Contractors M7</code> vault
▣ Build Gallery / File Workspace	Catalog of finished cards, assets, artifact URLs	<code>01_Command_Center/Outbox_Drafts/</code> → published

▣ Studio bay — background routing profiles

A. NotebookLM Advanced Research & Production Engine - ▣ **Core Research Node** — heavy multi-document ingestion, source data mapping, and evidence cross-verification. The truth layer: every claim traces to a source NotebookLM ingested (storm reports, policy language, RCAT/IKO docs, your playbooks and reviews). - ▣ **Executive Asset Engine** — turns raw research into finished business assets: **PDF reports, client slide decks, spreadsheets, Word summaries** — brand-styled (Royal Navy / Pineapple Gold, no green), PAUSED.

B. Higgsfield Creative Studio (CLI + cloud) — marketing, AI cloning, social video Connects via `@higgsfield/cli` inside the persistent terminal (no manual browser clicking). Three core skills: - ▣ **Generate** — up-to-4K ad creatives, TikTok clips, and cinematic videos up to 15s. - ▣ **Soul (AI Cloning)** — long-context visual training to build a *consistent* AI character/mascot — your founder likeness or the Pineapple mascot — that stays the same face/look across every scene. - ▣ **Product Photo Shoot** — high-end lifestyle imagery, ad templates, and mockups from a simple input photo (roofs, crews, branded trucks, before/after).

▣ **Spend guard**: Higgsfield burns paid credits. Every render request must show a **pre-render credit-cost estimate** and **block generation until you confirm**. Credits = money → Outbox Shield applies. No auto-spend, ever.

▣ PHASE 2 — THE 5-COLUMN SELF-DRIVING KANBAN PIPELINE

Housed inside the **Idea Factory** (`M7_Agent_Kanban.md` / `M7_Agent_Board.html`). Cards flow left → right; no manual shuffling. Each card keeps its `#agent` tag the whole way.

1. **Idea Input** — manual briefs, automated hooks, or voice transcriptions.
2. **Agent Planning** — the Mastermind arena where models debate, cross-critique, and build the blueprint.
3. **Human Approval** — a hard block. Nothing executes, renders, spends, or posts until you click go.
4. **Implementation** — parallel specialist agents build (incl. the 3 Higgsfield loops), managed by a Project Manager agent running builder → judge self-correction.
5. **Shipped Gallery** — final catalog of live deployments, blog paths, posted assets, and asset URLs.

Outbox Shield mapping: column 3 (Human Approval) = your `Outbox_Drafts/` folder. A card cannot cross into Implementation/Shipped without your explicit approval. Agents draft; you ship.

▣ STEP-BY-STEP EXECUTION BLUEPRINTS & PROMPTS (19 STEPS)

Step 1 — Framework Bootstrap & Environment Initialization (No Zip Required)

Process: Generate the full local file structure, environment parameters, and core scripts so the OS runs even without the original Hermes zip. **Prompt**:

"Act as Systems Engineer for Pineapple Contractors M7. Generate the complete initialization framework from scratch: package.json , server.js , .env.example , and directories /agents , /config , /memory , /tasks , /public/builds . Bind it to my existing vault at C:\Pineapple Contractors M7 . Keep all output local. Walk me through initializing it safely, one step at a time."

Step 2 — Voice Activation & Command Mapping (Hermes Jarvis Setup)

Process: Give the deck a low-latency wake-word voice layer for hands-free control. **Prompt:**

"Act as Hermes Jarvis. Configure a local low-latency voice layer with three control modes: **Wake Mode** (boot-up metrics summary), **Show Mode** (open a dashboard/bay), and **Create Mode** (route a spoken brief straight into the Idea Input column of M7_Agent_Kanban.md). Every routed card defaults to the #agent tag I name, and never auto-publishes."

Step 3 — The Agent Mastermind Team Setup & Cross-Critique

Process: Move the card to **Agent Planning**. Stand up the expert team; each NotebookLM-tied role has an explicit job so they hand work off cleanly. **Prompt:**

"Initiate the AI Mastermind chamber for Pineapple Contractors. Assign these personas and force them to submit, then critique, each other's drafts until the plan is airtight: - **Research Agent** → ingests source files via NotebookLM, summarizes them, checks page context, maps gaps, extracts core statistics (hail data, claim windows, RCAT/IKO facts, review counts). - **Writer Agent** → translates research into high-retention video scripts, blog outlines, or slide copy — in the Pineapple voice (simple, conversational, clear, actionable). - **Editor Agent** → audits layout/formatting, holds brand-tone consistency, strips fluff, enforces CPPA / IKO / no-green / phone 972-928-0788. - **Builder Agent (Claude Code / Higgsfield)** → writes code/pages and renders creative assets. - **Judge Agent** → intercepts every output BEFORE human review and grades it against the Master SEO Quality Control Checklist; returns explicit repair notes to the Builder recursively until it passes. No agent may mark anything 'ready' — only stage it PAUSED for Saia."

Step 4 — Core OS Persistence & V0.17 Model-Independent Routing

Process: Establish the persistent data + connector layer with automatic model failover. **Prompt:**

"Bridge Claude's reasoning with the persistent Hermes Agent V0.17 engine: persistent memory via a local SQLite database; model-independent routing with automatic failover (cloud model → local Ollama if one is down); a Markdown-backed skill catalog; and a terminal execution layer running Claude Code with a 20-second timeout tolerance and self-healing stream recovery. Log every route to the Memory Galaxy."

Step 5 — Activating Shared Memory (Hermes + Obsidian Vault Setup)

Process: Persistent shared memory so agents never need the business re-explained. **Prompt:**

"Connect the Hermes environment to my Obsidian vault C:\Pineapple Contractors M7 and initialize a 5-Layer Memory System (folder layout → notes → context → skills → recursive feedback). Treat 01_Command_Center/GROUNDING.md and MASTER_PLAYBOOK.md as the always-loaded About Me core context (company facts, brand voice, target avatars, the banned-word rules). Read them before every task."

Step 6 — Hermes V0.17 "Reach Release" Action Layers

Process: Turn on background execution, texting, concurrency, and image editing. **Prompt:**

"Activate the Hermes V0.17 'Reach Release' layers with four capabilities: **Asynchronous Multi-Agent Concurrency** (parallel threads), **iMessage Integration** (receive/reply to my remote text commands while I'm on mobile), **Contextual Image Editing** (localized Navy/Gold overlays, no green), and **No-Code Automation Blueprints**. All outbound actions stay PAUSED until I authorize."

Step 7 — NotebookLM Core Research Node (Ingestion Sequence)

Process: Feed the truth layer whenever a task needs evidence. **Prompt:**

"Act as the NotebookLM Core Research Node. Ingest the sources I name (NWS/storm reports, insurance policy text, RCAT/IKO docs, my 03_Knowledge_Mat notes, customer reviews). Then: (1) summarize each source in 3 bullets, (2) check page-level context so quotes are accurate, (3) map the content gaps a Frisco homeowner / property manager still has, (4) extract the core statistics with their source. Output a sourced research brief to 05_Campaign_Factory/ 10_Research_Stage/. Never invent a fact — if a source doesn't support it, flag it."

Step 8 — NotebookLM Executive Asset Engine (Reports / Decks / Sheets / Docs)

Process: Turn research into finished, brand-styled business assets. **Prompt:**

"Act as the NotebookLM Executive Asset Engine. Using only the sourced brief from Step 7, produce the asset I request — a **PDF report**, **client slide deck**, **spreadsheet**, or **Word summary** — styled in Royal Navy (#1A365D) + Pineapple Gold (#FBC02D), Cyan (#00BFFF) for status only, **no green**. Use CPPA / IKO / RCAT #03-0637 / phone 972-928-0788. Save it PAUSED to 01_Command_Center/Outbox_Drafts/ and log a Build Gallery card. Do not send to any client."

Step 9 — Higgsfield Creative Studio (Marketing · AI Cloning · Social Video)

Process: Stand up the self-contained creative engine — cloud Supercomputer + @higgsfield/cli — inside the Studio bay to plan, generate, clone, and render every marketing asset from one text brief, with a hard credit-cost confirm gate. **Setup (terminal, one-time):**

higgsfield auth login → then npx skills add higgsfield-ai/skills **Prompt:** "Deploy the **Higgsfield Creative Studio** in our terminal + Studio bay. Configure the sub-agents to run full multi-asset creative workflows without app-switching, under these parameters: 1. **Asset ingestion (plain English):** accept requests for TikTok ads, product/roof demo reels, storyboards, script sequences, HD thumbnails, captions, and email funnels. 2. **Three core skills:** **Generate** (up-to-4K ads, TikTok clips, ≤15s cinematic video); **Soul (AI Cloning)** — train a consistent founder/mascot character that holds the same face and look across scenes for repeatable on-brand content; **Product Photo Shoot** — lifestyle imagery + mockups from a simple roof/crew/truck photo. 3. **Pre-render cost gate:** before any render, output a clear creative blueprint (audience angle, format, model allocation) AND the estimated credit cost, and **block generation until Saia confirms**. Credits are money — never spend without my explicit yes. 4. **Omnichannel campaign template:** 'Create a full launch campaign for my CPPA offer: a structured landing layout, three short-form video ads (direct-response, storytelling, problem-solution), one premium click-focused thumbnail, and five follow-up emails — all in the Pineapple brand voice.' 5. **Compounding Brand Memory Bank:** save and reuse these for every pass — Brand: Pineapple Contractors; Audience: Frisco homeowners + property managers (ZIPs 75033/75034/75035); Tone: simple, conversational, clear, actionable; Offer: Complimentary Professional Photo Audit (CPPA); Colors: Royal Navy #1A365D + Pineapple Gold #FBC02D + Cyan #00BFFF status, **no green**; Credentials: RCAT #03-0637 · IKO Certified · phone

972-928-0788; Winning patterns: drone reveal, before/after, family-heritage, testimonial. All renders land PAUSED in 02_Media_Vault/ + Outbox_Drafts/ . I post; you never publish or spend alone."

Step 10 — The AI SEO Rank Machine Engine

Process: Build the pages and clusters that win Frisco search. **Prompt:**

"Run the AI SEO Rank Machine. From the Step 7 research, build a keyword cluster around Frisco storm/hail/insurance-claim intent (ZIPs 75033/75034/75035). Draft on-page content with FAQ schema, answering each question in the first 40 words (from M7_INTEGRATED_CAMPAIGN.md §5). IKO only, no GAF. Stage every page PAUSED before it touches the live site."

Step 11 — The SEO Everywhere Omnichannel Swarm Loop

Process: Spread one piece of research across every surface. **Prompt:**

"Deploy the SEO Everywhere loop. Take one approved asset and spin platform-native variants: GBP post, blog section, LinkedIn post, IG/TikTok caption, YouTube description — each keyword-aware, in the Pineapple voice, with CPPA CTA + phone 972-928-0788, no green. Stage all variants PAUSED in Outbox_Drafts/ ."

Step 12 — The Hermes Loop Engineering Quality Gate

Process: Autonomous builder → judge self-correction before anything reaches you. **Prompt:**

"Activate the Hermes Loop Engineering Quality Gate. After any asset is built (copy, page, OR Higgsfield render), the Judge Agent scores it against the Master SEO Quality Control Checklist AND runs 04_Tech_Lab/Scripts/brand_firewall.py --check (0 green, 0 banned required). On any fail, return explicit fixes to the Builder and re-run until it passes. Only a passing asset may be staged PAUSED. Log each pass/fail to 04_Tech_Lab/logs/ ."

Step 13 — Google Pomelli Social Content Engine

Process: Scan the brand DNA and generate on-brand social packs. **Prompt:**

"Deploy the Google Pomelli engine. Scan pineapplecontractors.com for brand DNA (logo, Navy/Gold palette, tone), then generate a branded social content pack for the week aligned to the 3 pillars (Authority / Proof / Heritage). Enforce CPPA, IKO, no green, phone 972-928-0788. Output PAUSED to Outbox_Drafts/ — I post."

Step 14 — Gemini in Chrome Multi-Tab Browser Automation Layer

Process: Competitive + SERP intelligence across many tabs at once. **Prompt:**

"Deploy the Gemini-in-Chrome multi-tab extractor. Open the top Frisco-roofer competitors + the live SERP for our target keywords, extract their angles, offers, and gaps into one comparison table, and hand it to the Research Agent. Read-only — capture intelligence, take no action on any site."

Step 15 — Codex Resource Safeguard & Strategic Reset (Checkpoint States)

Process: Protect the machine during heavy runs; snapshot before resets. **Prompt:**

"Enable the Codex Resource Safeguard. Before any heavy operation (concurrency arrays, Higgsfield render batches, framework reset), write a checkpoint snapshot of open cards + memory state to `04_Tech_Lab/checkpoints/` so nothing is lost or duplicated. Monitor capacity; if a worker stalls past tolerance, checkpoint and self-heal rather than crash."

Step 16 — The Human Approval Gate (Outbox Shield)

Process: The hard stop. The only door to going live or spending. **Prompt:**

"Enforce the Human Approval Gate. Nothing in `Outbox_Drafts/` is published, sent, scheduled, rendered for paid credits, or spent without Saia's explicit 'GO'. Present each item as a one-line approval card: what it is, where it posts, the credit cost (if any), and the firewall result. Wait for my word. Never flip `delivery_state` from PAUSED yourself."

Step 17 — Implementation Swarm + Higgsfield Production Loops + Hyperframes Video

Process: On approval, the swarm builds — including the three Higgsfield marketing loops and video. **Prompt:**

"On my approval, run the Implementation Swarm in parallel under the Project Manager agent. Coordinate the three Higgsfield loops natively: - **Ad Engine Loop** → Builder + Writer batch-generate multi-format UGC ads, storyboards, and scripts. - **Brand Builder Loop** → conceive niche product visuals, landing-page graphics, and hero banners from Markdown briefs (using the Soul-cloned founder/mascot for consistency). - **Content At Scale Loop** → mass-produce batches of short-form videos + graphics under the Loop Engineering Quality Gate. For long-form, also trigger the Hyperframes video engine: auto-script (hook 0–15 frames, 3s end card), voice + presenter + B-roll, assemble the 50/5/3 cut, stamp the Navy/Gold credential bar (RCAT #03-0637 · IKO Certified · 972-928-0788, no green). Save all MP4s to `02_Media_Vault/` and cards to the Build Gallery — still PAUSED for my post."

Step 18 — Multi-Platform Distribution + Scheduled Tasks / Daily Reporting Agent

Process: Coordinated posting (by you) plus the always-on reporting loops. **Prompt:**

"Prepare multi-platform distribution: queue the approved assets per surface with best-time notes — but DO NOT post; hand me the ready-to-paste queue. Then confirm the Scheduled Reporting loops read the new CRM (`02_Workspaces/Pineapple_Manana_Master_CRM_M7.xlsx` , not Airtable): the 6AM performance brief, the review sweep, the morning handshake, the denial-sniper. Each writes a PAUSED brief to `Outbox_Drafts/` ."

Step 19 — File Asset Preservation & Memory Galaxy Logging (Build Gallery)

Process: Nothing is lost; everything is remembered. **Prompt:**

"Close the loop. Preserve every generated asset (incl. Higgsfield renders + Soul character models) to its `02_Media_Vault / Outbox_Drafts` home, move the Kanban card to **Shipped Gallery** (keep its `#agent` tag), and

write a Memory Galaxy log entry to 01_Command_Center/memory/ capturing what was built, the sources used, the credits spent, and the firewall result. Append the session to MEMORY.md . Then give me a 5-bullet recap."

☐ NOTEBOOKLM EXECUTION CHECKLIST (scannable)

- ☐ **Sources loaded** — every named source actually ingested (no ghost citations).
- ☐ **Core Research Node online** — summaries + page-context check done.
- ☐ **Gaps mapped** — the unanswered Frisco questions are listed.
- ☐ **Stats extracted with source** — each number traces to a document.
- ☐ **Asset type chosen** — PDF / slide deck / spreadsheet / Word.
- ☐ **Brand style applied** — Royal Navy + Pineapple Gold, Cyan status only, **no green**.
- ☐ **Lexicon clean** — CPPA, IKO, The Pineapple Standard, phone 972-928-0788.
- ☐ **Firewall pass** — `brand_firewall.py --check` = 0 green, 0 banned.
- ☐ **Judge graded** — cleared the Master SEO Quality Control Checklist.
- ☐ **Staged PAUSED** — asset in `Outbox_Drafts/` , card in Build Gallery, nothing sent.

☐ HIGGSFIELD CLI FAST-SETUP CHECKLIST (scannable)

- ☐ **Auth** — `higgsfield auth login` completed in the terminal bay.
- ☐ **Skills added** — `npm install higgsfield-ai/skills` installed.
- ☐ **Offer defined** — clear CPPA offer + target niche stated.
- ☐ **Blueprint reviewed** — visual framing, hooks, and model paths checked.
- ☐ ☐ **Credit cost validated** —

PART 4 — M7_INTEGRATED_CAMPAIGN.md

M7 INTEGRATED CAMPAIGN — ONE ENGINE, THREE CHANNELS

This is your reworked June/Summer 2026 marketing campaign. It merges the May performance learnings + content calendar + the AEO/GEO page rewrites from your two June drafts, corrected to the **updated M7 brand standard**: The Pineapple Standard (never Toa/Warrior/Six Brothers), **IKO Certified** (GAF dropped), **CPPA** (never "free"), **no green**, phone **972-928-0788**.

The point: **Social + LSA + SEO/AEO are not three jobs — they are one flywheel**. Social creates demand and reviews → reviews + fresh content raise LSA rank → SEO/AEO makes you the answer AI gives → all three feed the same CRM. Run them together or you leave leads on the table.

THE FLYWHEEL (how the three channels feed each other)

```
SOCIAL (demand + proof)
  | posts drive profile visits, DMs, reviews
  ▼
LSA + GBP (capture + rank) ← reviews from social raise your Maps/LSA rank
```

```

| 5-min reply → booked CPPA → signed job → ask for review
▼
SEO / AEO (be the answer) ← reviews + fresh pages = authority AI search cites
| ranked pages + AI citations send no-cost organic leads
▼
back to SOCIAL (testimonial clip from the signed job) → repeat

```

Every signed job should produce: 1 review, 1 testimonial clip, 1 before/after. That's the fuel.

SECTION 1 — WHAT WORKED IN MAY (your proof — repeat it)

May was a breakout month (~27% engagement lift). It was not luck — three forces compounded: post-storm urgency, Polynesian heritage storytelling, and the drone + family hybrid visual style.

Top performers to repeat: - **Drone flyover + roof-damage reveal Reels** — ~22,000 avg plays, 5.8% engagement. (*highest reach*) - **Before/After carousels** (storm damage → restoration) — 4.2% save rate. (*highest intent signal*) - **Family / heritage storytelling videos** — +340% comment velocity vs average. (*highest trust*) - **Pacific Heritage tie-in posts** — 2.1× organic reach. (*culture = reach multiplier*) - **CPPA offer posts** (no banned language) — 6.4% DM conversion. (*highest direct lead driver*)

Why it worked (keep doing this): - Tongan proverb anchors drove "save" behavior (people screenshot the caption). - Pineapple Gold (#FBC02D) hook stops the scroll in the first 0.3s. - Royal Navy (#1A365D) credential bar (RCAT #03-0637, IKO Certified) builds trust at the bottom. - Property managers engage Tue–Thu, 7–9 AM. Luxury estates respond to drone + investment framing.

Rule of the campaign: don't reinvent — re-run the 5 winners above, weekly, with new clips.

SECTION 2 — WHO WE'RE TARGETING (two segments, one campaign)

Segment A — Frisco Property Managers (highest volume; one contact = 5–20 roofs). ZIPs 75033, 75034, 75035. HOA communities + multi-unit. Best window: Tue–Thu 7–9 AM.

Segment B — Frisco Luxury Estates (\$700K–\$2M+ homes; job value \$24K–\$45K). Starwood, Newman Village, Stonebriar. Longer decision; buy on reputation + low-disruption process.

Both map to your existing 1-3-12 Meta avatars (Local Fan / Culture Seeker / Founder's Circle) in `Outbox_Drafts/2026-06-18_Campaign_Storm_Launch.md`. **This campaign is the organic + LSA + SEO layer that warms those avatars before the paid ad ever runs.**

SECTION 3 — SOCIAL ENGINE (the demand + proof channel)

Platforms live: Facebook, Instagram, LinkedIn, YouTube, TikTok (@pineappleroofing). The gap is **consistency**, not presence. Cadence: **3–4 posts/week per platform**, rotating the 3 content pillars below. Pull clips with the Content Factory (`M7_CONTENT_FACTORY.md`).

The 3 pillars (rotate): 1. **AUTHORITY** — drone reveal, before/after, credential bar (RCAT #03-0637 · IKO Certified). 2. **PROOF** — testimonials, 5.0★ review screenshots, claim-approved stories. 3. **HERITAGE** — Polynesian-owned, family-operated story (your highest-trust, highest-reach content).

4-Week Content Calendar (one theme per week)

Week	Theme	Goal	Lead post
1	Establish Authority	Warm property managers with proof-of-expertise	Drone reveal + "damage you can't see from the driveway"
2	Social-Proof Blitz	Convert warm PM leads with evidence	Testimonial + before/after carousel
3	Property-Manager Push	Close 5 PM accounts (15+ roofs)	Direct PM offer: portfolio CPPA
4	Luxury Close + Heritage	Close luxury jobs + build brand equity	Premium drone + family heritage story

Hook Bank (brand-compliant — start from May winners)

- "Your roof has damage you can't see from the driveway."
- "Same storm. Two houses. One filed a claim in time."
- "29 days left on your Frisco claim window."
- "We treat your home like our own — that's Tauhi Vā." (*heritage*)
- "I thought my claim would be denied. They proved me wrong." (*testimonial*)

When a post beats 1.5% CTR, add its hook here. When one flops, retire it. (Mirror in `hook_bank.md`.)

Every post checklist (so the firewall always passes)

- [] Pineapple Gold hook in first 0.3s · Royal Navy credential bar (RCAT #03-0637 · IKO Certified).
- [] CPPA language only — never "free." Phone **972-928-0788. No green anywhere.**
- [] One Tongan proverb anchor where it fits. CTA → DM or call for a CPPA.

SECTION 4 — LSA + GBP ENGINE (the capture + rank channel)

Social makes demand; **LSA + Google Business Profile capture it and rank you on Maps**. Your 209 reviews at 5.0★ are the single biggest rank lever you own — protect and grow them.

Weekly LSA/GBP actions (15 min): - [] **Reply to every LSA/Meta lead in < 5 minutes**, 7am–9pm (speed-to-lead — see `M7_LEAD_ENGINE.md`). - [] **Dispute bad-fit leads** for credits (wrong service / out-of-area / spam) — most people overpay here. - [] **2 GBP posts/week** + fresh geotagged photos (Frisco/Lewisville) from your media. - [] **Ask every finished customer for a review** (the review loop) — reviews raise LSA rank + lower CPL. - [] Confirm Google Guaranteed badge active; categories = Roofing; service area = Frisco + Collin + Denton. - [] Log every lead in CRM `Google_LSA_Leads` tab. Review cost-per-signed-job each Monday.

The connection: the testimonial you post on social → ask that customer for the Google review → review shows in LSA → LSA rank rises → cheaper leads. Same customer, three channels.

SECTION 5 — SEO / AEO ENGINE (be the answer AI gives)

This is your reworked, **GAF-free, IKO-only** Answer-Engine content. Goal: when someone asks ChatGPT, Gemini, Claude, or Google AI "best Frisco storm roofer," **Pineapple Contractors is cited**. Deploy each block below as an FAQ-schema section on the matching service/area page (answer in the first 40 words). All credentials: **RCAT #03-0637 · IKO Certified** (no GAF).

5.1 Core Frisco service page — anchor paragraph

Pineapple Contractors is Frisco's RCAT Licensed (#03-0637) and IKO Certified storm-restoration authority. Serving ZIP codes 75033, 75034, and 75035, we specialize in full storm restoration for residential and commercial properties — hail-damage documentation, insurance-claim support, and Full Restoration Coverage Evaluations.

5.2 FAQ schema block — homeowner intent

What is storm roof restoration in Frisco, TX? Professional documentation of hail or wind damage, insurance-claim preparation, and complete roof replacement or repair using certified materials. Pineapple Contractors (RCAT #03-0637) provides Complimentary Professional Photo Audits to document damage before insurance windows close.

What is a Complimentary Professional Photo Audit (CPPA)? A drone-assisted roof-documentation service for Frisco homeowners and property managers. It produces a full photographic record of storm damage used to support insurance claims and prevent denials. CPPA appointments are scheduled within 48 hours.

Why choose an RCAT Licensed contractor in Frisco? RCAT licensing (#03-0637) means your contractor passed state certification, carries proper insurance, and installs roofing that preserves your manufacturer warranty. Non-licensed contractors can void IKO warranties and invalidate insurance claims.

What areas of Frisco do you serve? ZIP codes 75033, 75034, and 75035 — including Starwood, Newman Village, Stonebriar, and surrounding luxury-estate communities, plus property managers across the Frisco Core 30 area.

What credentials does Pineapple Contractors hold? RCAT License #03-0637 and IKO Certified Contractor status — verifying installer training, workmanship standards, and access to premium material warranties.

5.3 FAQ schema block — insurance-claim intent

How do I file a hail-damage insurance claim in Frisco, TX? (1) Document damage within your policy's claim window (typically 12 months from date of loss). (2) Contact an RCAT Licensed contractor like Pineapple Contractors (#03-0637) for a CPPA. (3) Submit the photographic documentation to your insurer. (4) Request a Full Restoration Coverage Evaluation before accepting any settlement.

What if my hail-damage claim was denied in Frisco? Denied claims are often the result of insufficient documentation or damage missed during the initial adjuster inspection. Pineapple Contractors (#03-0637) has a track record of getting previously denied Frisco claims re-opened with drone-assisted documentation and RCAT-certified assessment.

How long do I have to file a hail-damage claim in Texas? Typically 12 months from the date of loss, and two years to file suit if disputed. The documentation window — before weather degrades the evidence — is much shorter. Schedule a CPPA within 30 days of any significant storm.

Does using a non-licensed contractor void my insurance claim? Yes. In Texas, using an unlicensed contractor after a hail claim can void your claim and your material warranty. Always verify RCAT licensing (#03-0637) and IKO certification before work begins.

5.4 FAQ schema block — property-manager intent

What roofing services does Pineapple Contractors provide for Frisco property managers? Multi-unit Complimentary Professional Photo Audits, storm-damage portfolio documentation, insurance-claim preparation

and adjuster coordination, priority scheduling for 10+ unit accounts, and a dedicated coordinator for ongoing portfolio management. RCAT #03-0637. IKO Certified.

How quickly does Pineapple Contractors respond to storm events for Frisco HOAs? Initial site assessment targeted within 72 hours of a significant weather event; CPPA documentation completed within 7 business days. Portfolio-agreement clients receive priority-tier scheduling.

What ZIP codes do you serve for commercial and multi-unit properties? 75033, 75034, and 75035 — HOA communities, apartment complexes, office parks, and retail throughout the Frisco Core 30 corridor.

Why do Frisco property managers prefer RCAT Licensed contractors? RCAT licensing (#03-0637) provides the compliance documentation property managers require: verified liability insurance, bonding, manufacturer-warranty compliance, and state-certified installation — protecting them from liability and insurance disputes.

All SEO/AEO output above is **PAUSED** as web copy. Publish to the site via the Outbox Shield rule: a human pastes it live; no agent publishes. See `M7_WEBSITE_SEO_FIXLIST.md`.

SECTION 6 — WHAT HERMES RUNS vs WHAT YOU DO

Hermes is your worker for the repeatable parts. **It drafts; you publish.** Everything lands PAUSED.

Task	Owner	How
Pull testimonial "money quotes" from media	Hermes	Content Factory prompt → <code>Outbox_Drafts/</code>
Draft weekly social captions (3 pillars)	Hermes	<code>social_content_batch</code> skill → firewall → PAUSED
Draft the FAQ-schema pages above per URL	Hermes	from Section 5 → PAUSED
Weekly review (which source signed jobs)	Hermes	<code>weekly_review</code> skill, Mon 08:00 → PAUSED brief
Reply to leads in 5 min	YOU	speed-to-lead text, phone
Post to social / publish pages	YOU	from the PAUSED drafts
Launch / change ad spend	YOU	Meta Ads Manager, manual (Outbox Shield)

Copy-paste Hermes prompt to kick this off:

Read `01_Command_Center/M7_INTEGRATED_CAMPAIGN.md` and `M7_CONTENT_FACTORY.md`. Draft Week 1 social content: 4 captions (Authority/Proof/Heritage pillars), each with a Pineapple Gold hook, RCAT #03-0637 + IKO credential bar, CPPA CTA, phone 972-928-0788, one Tongan proverb anchor. Rules: never "free", no green, no GAF, no Toa/Warrior. Run `brand_firewall.py --fix`, then save PAUSED to `01_Command_Center/Outbox_Drafts/`.

SECTION 7 — THIS WEEK (do these, ignore the rest)

1. Pick **5 clips** from the media (1 testimonial + 2 before/after + 1 drone + 1 heritage).
2. Have Hermes draft Week 1 captions (prompt above). You review + post 3–4.
3. Reply to every LSA lead in **5 minutes**. Ask every finished customer for a review.
4. Post the Section 5.1 + 5.2 FAQ block to your core Frisco page (or queue it for the web fix).
5. Monday: read Hermes' weekly review → put next effort on whatever **signed a job**.

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 5 — M7_AGENT_LOOPS.md

□ M7 AGENT LOOPS — WHAT RUNS WITHOUT YOU PROMPTING

What an "agent loop" is (plain English)

A normal prompt = you ask, the AI answers, done. You have to ask again next time. An **agent loop** = a job that **fires on its own trigger** (a clock, or a change in your data), does the work, and leaves the result waiting for you. **You stop being the trigger.**

A loop has three parts: 1. **Trigger** — what starts it (a time like "Monday 7am", or an event like "lead marked Denied"). 2. **The job** — the steps it runs (read files → draft → firewall-check → save). 3. **The landing spot** — where the result goes. For us that's almost always 01_Command_Center/Outbox_Drafts/ as a **PAUSED draft** (Outbox Shield — you publish, not the bot).

Why this is the whole point of M7: your rules (CPPA, IKO, no green, phone, the avatars) live in GROUNDING.md + the playbooks. Every loop reads those first. So the loop already knows your brand — you never re-explain it. That's how you "don't have to prompt all the agents."

TWO ENGINES RUN YOUR LOOPS

Engine	What it is	When it runs	Needs
Cowork Scheduled Tasks (this Claude app)	jobs in Scheduled/ that I run	when the Claude desktop app is open (catches up on next launch)	the app open
Hermes skills (04_Tech_Lab/ hermes_skills/)	YAML jobs Hermes runs locally	when the Hermes daemon is running	Hermes + Ollama on

Same idea, two runners. Cowork loops are great for anything touching Meta/Google/web. Hermes loops are great for local file work and run even when this app is closed.

YOUR LOOPS RIGHT NOW (live inventory)

A. Cowork scheduled tasks (in Scheduled/)

Loop	Trigger	What it does	Status
weekly-social-captions ☐ new	Mon 7:00 AM	Drafts 8 brand-compliant captions (3 pillars) → PAUSED to Outbox	☐ ON
pineapple-gbp-monday-draft	Mon 8:00 AM	Drafts a Google Business Profile post, alerts you to paste it	☐ ON
pineapple-deal-resurrector	1st & 15th, 8 AM	Revives dead leads (Closed Lost) using storm + roof-age data → drafts	☐ ON
pineapple-daily-performance-brief	Daily 6:00 AM	Ad spend + lead count vs 7-day avg, from new CRM	☐ ON
pineapple-morning-handshake	Daily 7:30 AM	New-lead scan + storm weather brief, from new CRM	☐ ON
pineapple-lead-enrichment	Daily 7:35 AM	Enriches new CRM leads (avatar + job-value band)	☐ ON
pineapple-review-sweep	Daily 5:00 PM	Flags signed jobs to ask for reviews; queues testimonials	☐ ON
pineapple-denial-sniper-monitor	9 AM & 4 PM	Watches CRM for "Claim Denied" → drafts a Denial Sniper reply	☐ ON

B. Hermes skills (in 04_Tech_Lab/hermes_skills/)

Loop	Trigger	What it does
review_request_loop	Daily 18:00	Drafts PAUSED review-request texts for the day's finished jobs
weekly_review	Mon 08:00	"Track & double down" — which source signed jobs, 1% Kill / 1.5% Scale brief
social_content_batch	on call	Batch-drafts social content, firewall-checked, PAUSED
generate_cppa_proposal	on call	Drafts a CPPA proposal (\$18K+ floor), PAUSED
brand_compliance_check	on call	Runs the firewall, returns PASS/FAIL

C. Always-on background loops (not scheduled — event-driven)

- **Brand Firewall --watch** — live-watches the 4-Fala rooms; any green or banned term fails instantly.
- **Campaign Factory pipeline** (05_Campaign_Factory): a 3-stage loop with CONTEXT.md gates — 10_Research_Stage → 20_Copy_Drafting → 30_Compliance_Audit . Each artifact is wrapped in the Cross-Agent JSON envelope (see CROSS_AGENT_PROTOCOL.md) so Claude Code, Hermes, and NotebookLM hand work to each other **without you in the middle** — and nothing advances unless the firewall passes.
- **Daily Drive sync** (M7_DAILY_SYNC.bat , registered once) — keeps the vault settled.

☐ AIRTABLE RETIRED — all loops now read the new CRM

As of 2026-06-22, **Airtable is decommissioned**. All 5 previously-stale loops were **rewired to the new M7 CRM** (02_Workspaces/Pineapple_Manage_Master_CRM_M7.xlsx — tabs: Google_LSA_Leads, Master_Lead_Tracker, Attribution, Meta_Ads, Assets) and **turned back on**. Every one is draft-only and lands in Outbox_Drafts — nothing publishes or edits the CRM without you. The denial monitor was also dialed back from hourly to twice daily (9 AM / 4 PM) to cut noise.

First-run tip: any loop that touches a live connector (e.g. Meta Ads, weather) may pause on a permission prompt the first time. Open the **Scheduled** panel → **Run now** on each once to pre-approve its tools; after that they run untouched. Loops that only read the CRM file need no approval.

WHERE CLAUDE & CLAUDE CODE FIT (do they loop?)

- **Claude (this app)** — runs the **Cowork scheduled loops** above on a clock. This is your hands-free layer.
- **Claude Code** — the **builder**, not a clock-loop. It runs when you (or Hermes via delegate_task) hand it a job — big builds, vault audits, multi-file refactors. Its "loop" is the Campaign Factory pipeline: it picks up a stage, does research/drafting, writes the JSON envelope, passes it on.
- **Hermes** — the **orchestrator**. It runs its own scheduled skills AND can dispatch Claude Code, Ollama, etc. If you want one brain to route everything, Hermes is it.

So: you do NOT prompt each agent every time. You set the loop once (or I do), the agent reads your grounding files, and it produces PAUSED drafts on schedule. Your only standing jobs stay human: **answer leads in 5 min, approve/post the drafts, authorize ad spend.**

THE BENEFIT (why loops beat prompting)

- **Consistency** — the content/reviews/briefs happen even on your busy days. No willpower required.
- **No re-explaining** — brand rules are read from files every run; the firewall guarantees compliance.
- **Speed** — Monday morning you already have captions, a GBP post, and a decision brief waiting.

- **Safety** — every loop lands PAUSED. Nothing publishes or spends without you. (Outbox Shield.)
- **Leverage** — this is how one person runs the marketing of a team.

HOW TO ADD A NEW LOOP (just tell me)

Say: "Make a loop that every [when] does [what], saved to Outbox." I'll wire it, firewall it, and it shows up in your Scheduled/ panel. You review the first run and approve its tools once.

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 6 — M7_LEAD_ENGINE.md

M7 LEAD ENGINE — PINEAPPLE CONTRACTORS (ROOFING)

You have Google LSA leads flowing. This converts them. Three layers, in order of impact. All copy is brand-compliant (CPPA, IKO, no banned terms). Phone: 972-928-0788.

LAYER 1 — SPEED-TO-LEAD (the single biggest win)

A 5-minute reply can double your booking rate. Beat every agency by being fast and human.

Rule: every LSA / Meta lead gets a text or call within **5 minutes**, 7am–9pm. **Setup:** turn on LSA lead notifications to your phone + email. Pin this text so you can fire it one-handed.

Instant text-back (paste, fill [brackets]):

Hi [Name], this is [Your Name] with Pineapple Contractors – thanks for reaching out about your roof. We're Polynesian-owned, family-operated, RCAT Licensed #03-0637, IKO Certified, protecting North Texas since 2005. I'd like to set up your Complimentary Professional Photo Audit (CPPA) – drone + ground, claim-ready report. What works better, today or tomorrow? – 972-928-0788

If no reply in ~1 hour:

Hi [Name], following up on your roof – I can have a tech out for the CPPA as early as [day]. Want me to hold that slot? – Pineapple Contractors, 972-928-0788

LAYER 2 — REVIEWS (the #1 driver of LSA ranking + trust)

More 5-star Google reviews = higher LSA rank = cheaper leads. Ask after EVERY completed job.

Same-day text (after job done):

Hi [Name], it was an honor protecting your home. Family to family – would you share a quick Google review? It helps other North Texas neighbors find us: [GOOGLE_REVIEW_LINK]
Mālō 'aupito. – [Your Name], Pineapple Contractors

3-day nudge (if none yet):

Hi [Name], no pressure at all – if you had a good experience, a 1-line Google review would mean the world to our family business: [GOOGLE_REVIEW_LINK]. Thank you!

Targets: ask 100% of finished jobs · aim 5+ new reviews/week · reply to every review (good or bad). **Get your link:** Google Business Profile → Ask for reviews → copy the short link → paste above.

LAYER 3 — ATTRIBUTION (know what works, double down)

Simple beats fancy. One sheet tells you where to spend.

Add to every intake: "How did you hear about us?" (LSA / Google / Meta / Referral / Yard sign) **Tag Meta links:** `?utm_source=meta&utm_campaign=storm&utm_content=local_fan` **Track in one Google Sheet** (columns):

Date	Name	Source	Job \$	CPPA booked?	Job signed?	Review asked?	Review left?
------	------	--------	--------	--------------	-------------	---------------	--------------

Weekly math (Monday): for each source → leads, booked jobs, \$ signed, cost per booked job. Put next week's budget on the source with the lowest **cost per signed job** (not per click).

HOW THE M7 SYSTEM SUPPORTS THIS

- **m7_scoring.py** — scores/ranks incoming leads (Frisco ZIP, \$700k+, storm) so you call the hottest first.
- **Outbox_Drafts** — holds your review + follow-up templates, PAUSED, ready to send.
- **Dashboard** — your daily glance; telemetry shows which ad avatar is converting.
- **Hermes (optional, later)** — can auto-send the review request after a job is marked done.

THIS WEEK (do this, skip everything else)

1. Turn on LSA lead alerts to your phone. Pin the instant text-back.
2. Grab your Google review link; start texting every finished customer today.
3. Make the attribution sheet; log every lead this week. That's the whole growth engine. The AI just makes it faster.

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 7 — M7_GROWTH_ENGINE.md

M7 GROWTH ENGINE — SEO/AEO · LEADS · BRANDING

How to grow Pineapple Contractors using the AI ecosystem you already built. The split: **NotebookLM** = facts/research. **Gemini Gems** = your brand voice. **Hermes** = schedules it. **brand_firewall** = compliance. You = press publish.

THE GROWTH FLYWHEEL (everything feeds reviews + reviews feed everything)

LSA + Ads → fast response → booked CPPA → great job → ASK FOR REVIEW → more reviews → higher LSA/Maps rank → cheaper leads → repeat. Reviews are the center. Guard them.

1. AEO / GEO — be the answer AI search gives (your edge over competitors)

Goal: when someone (or ChatGPT/Google AI) asks "best Frisco roofer for hail claims," you're cited. -

NotebookLM (research): load competitor pages + Google "People Also Ask" + your reviews. Prompt: *"Based ONLY on these sources, list the 15 questions Frisco homeowners ask about hail roof claims, and the gaps competitors don't answer well. Cite sources."* - **Gemini Gem (write):** a "Pineapple Roofing Writer" Gem (PACT framework) turns each question into an FAQ answer in your voice — answer in the **first 40 words**, then detail. - **Publish:** add as FAQ pages + FAQ schema on each service-area page (see M7_WEBSITE_SEO_FIXLIST.md). - **Proof:** embed 2-3 real Google reviews per page (fresh, keyword-rich, trust).

Why it works: AI engines cite pages that answer directly + have authority signals (your 200+ reviews).

2. LOCAL SEO (Maps + GBP)

- Fix NAP everywhere → 972-928-0788 (done in M7; update GBP/BBB/Yelp/FB).
- GBP: 2 posts + fresh photos/week from `02_Media_Vault`, seed Q&A, reply to every review.
- Service-area pages already exist — strengthen the top 5 cities (Frisco, McKinney, Plano, Lewisville, Allen) with unique copy + reviews + FAQ schema.

3. LEAD GENERATION (in priority order)

1. **LSA** (live) — respond <5 min, mark booked, dispute bad leads. Highest ROI today.
2. **Review loop** (Hermes `review_request_loop`) — compounds rank, lowers cost-per-lead.
3. **Meta campaign** — `Outbox_Drafts/2026-06-18_Campaign_Storm_Launch.md`, \$250/wk, you launch.
4. **Content/AEO** — the FAQ + blog engine above captures "research" searchers.

4. BRANDING (your unfair advantage)

- The story sells: **Polynesian-owned, family-operated, since 2005, 200+ five-star reviews**. Lead with it.
- Founder/personal brand (Saia) — heritage + behind-the-scenes outperforms the company page. Cross-post.
- Consistency: 3-4 posts/week, rotate Sale / Culture / Recruit (asset library in the CRM).
- One look everywhere: Royal Navy + Pineapple Gold, never green. The firewall keeps it honest.

WHO DOES WHAT (the ecosystem)

Job	Tool
Find what to write (gaps, questions, keywords)	NotebookLM (cited research)
Write it in brand voice	Gemini Gem (PACT)
Private/offline drafts	Ollama
Schedule + assemble + loop	Hermes
Compliance gate	brand_firewall.py
See it all	Dashboard (localhost:3000)

90-DAY PLAN (don't do it all at once)

Weeks 1-2 — Foundation: fix NAP + "free" → CPPA on site/GBP; turn on Hermes review loop; launch Local Fan ad set. **Weeks 3-6 — Capture:** AEO FAQ pages (NotebookLM → Gemini), 2 blog posts, GBP posts/photos

weekly, log every lead in CRM. **Weeks 7-12 — Scale:** double down on the winning lead source (Attribution tab), expand top-5 city pages, weekly testimonial video from your 39GB media.

THE ONLY METRIC THAT MATTERS

Cost per booked CPPA → signed job, per source. Everything above exists to lower it. Track it in the CRM Attribution tab; shift budget to the winner monthly.

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 8 — M7_CONTENT_FACTORY.md

M7 CONTENT FACTORY — TURN MEDIA INTO LEADS

You have drone footage, before/after, a VSL, and client testimonials. This turns them into a steady stream of short, hooky ads. Tools: **Higgsfield** (AI video — clipping, virality scoring, reframe), your **shot-builder / clip skills**, `video-multiplier.py`, the **50/5/3 engine**, and the **brand firewall**. Everything outputs PAUSED → you post.

THE PIPELINE (raw → ad)

```
01_RAW_INTAKE → m7_media_index.py (know what you have)
  → IDENTIFY viral moments (Higgsfield virality predictor + the hook rubric below)
  → CLIP to 8-15s vertical (Higgsfield auto-clipper / personal_clipper, reframe 9:16)
  → 50/5/3 assembly (hook 0-15 frames · body · 3s end card)
  → HOOK + caption + Navy/Gold overlay + CPPA CTA + 972-928-0788 (NO green)
  → brand_firewall.py --fix on captions
  → 04_READY_TO_POST → Outbox_Drafts (PAUSED) → you post 4 ways
```

STEP 1 — FIND THE VIRAL PARTS (don't post whole videos)

For drone/before-after: the wow moment is the *reveal* — the cut from damaged → restored. Clip 3s before + 5s after. **For the VSL + testimonials:** run each through **Higgsfield's virality/analysis** to score segments, then keep the highest-energy 8-15s. If doing it by eye, use this rubric — a clip is ad-worthy if it has: - **Pattern interrupt in first 1.5s** (motion, bold claim, a face mid-sentence). - **An emotional/relatable line** ("I thought my claim would be denied..."). - **A specific number** ("\$0 out of pocket" → say "Full Restoration Coverage"; "47 hail hits"; "2 days"). - **A transformation** (stress → relief; old roof → new roof). - **A quotable objection-handler** ("two other roofers said it wouldn't qualify — they were wrong").

STEP 2 — MINE TESTIMONIALS FOR "MONEY QUOTES" (copy-paste prompt)

Feed a testimonial transcript to your AI (NotebookLM/Gemini/Higgsfield analysis):

```
Here is a client testimonial transcript. Extract the 5 strongest 8-15 second clips for a roofing ad. For each: the exact quote, start/end timestamp, why it converts (emotion/proof/objection), and a 3-5 word on-screen hook. Brand rules: never use "free"→ say CPPA; never "$0 down"→ "Full
```

Restoration
Coverage"; no green. Output a table.

Save the output to `02_SORTED_PROJECTS/Testimonials/<name>_clips.md`.

STEP 3 — BULK EDIT (Higgsfield + skills)

- **Higgsfield:** auto-clip the scored segments, reframe to 9:16, captions on.
- **shot-builder skill / video-multiplier.py:** batch the cuts into the 50/5/3 format and stamp the brand overlay (Pineapple Gold top hook, Royal Navy bottom credential bar, CPPA + phone end card).
- One source video → many cuts (different hooks) for A/B testing.

STEP 4 — THE HOOK BANK (reuse what works)

Keep a running list in `10_STRATEGY/hook_bank.md`. Start it from your winners: - "Your roof has damage you can't see from the driveway." - "Same storm. Two houses. One filed a claim." - "I thought my claim would be denied. They proved me wrong." (testimonial) - "29 days left on your Frisco claim window." - "We treat your home like family — that's Tauhi Vā." When an ad wins (>1.5% CTR), add its hook here. When one flops, retire it.

STEP 5 — DEPLOY EACH ASSET 4 WAYS

GBP photo/video post · Reel/TikTok · YouTube Short · Meta ad creative (Storm Launch campaign). Log which hook + clip drove leads in the CRM → that's your data for the `weekly_review` skill.

WEEKLY CADENCE (realistic, ADHD-friendly)

- Pick **5 clips/week** (don't touch all 39GB). 1 testimonial + 2 before/after + 1 drone + 1 culture.
- Batch-edit in one Higgsfield session. Caption + firewall. Stage PAUSED.
- Post across the 4 surfaces. Done.

GUARDRAIL

Higgsfield "Advantage+"-style auto-enhancements OFF for brand control. No green, no banned terms — the firewall checks every caption. All ad spend stays human-approved (Outbox Shield).

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 9 — M7_MARKETING_AUDIT.md

M7 MARKETING AUDIT — PINEAPPLE CONTRACTORS (ROOFING)

Based on your public web presence (pineapplecontractors.com), Google Business Profile, and review platforms. LSA/GBP dashboard items are a checklist (I can't log in — you verify).

☐ YOUR BIGGEST ASSET (lead with this everywhere)

- **~209 Google reviews, 5.0 stars.** This is rare and powerful. It's the #1 driver of LSA rank AND Maps rank. Put "5.0★ · 200+ reviews" in every ad, landing page, and GBP post.
- Strong site (Scorpion-built): deep service-area pages, certs (RCAT #03-0637, IKO, BBB, minority-owned MBE/HUB/SBE), 50-yr warranty, financing, insurance-claims page.

☐ TWO THINGS TO FIX TODAY (consistency = trust + ranking)

1. **Phone number mismatch.** Website shows **972-928-0788**. Your M7 playbook/campaign use **972-928-0788**. Pick ONE and make it identical on site, GBP, ads, CRM. Inconsistent "NAP" (Name/Address/Phone) actively hurts local SEO + LSA. → Decide the number, tell me, I'll fix every M7 file.
2. **"Free" on the live site vs the M7 ban.** Your site uses "free estimates / free inspection." Your M7 rule bans "free" → CCPA. Decide the scope: (a) align the public site to "Complimentary Professional Photo Audit," or (b) keep the M7 ban for AI/ad output only. Right now they conflict.

1. GOOGLE BUSINESS PROFILE (GBP) — your money engine

You have a profile (Lewisville). Weekly actions (15 min): - [] Confirm primary category = **Roofing Contractor** (add: General Contractor, Roofing Supply if used). - [] Post 1–2 GBP updates/week (offers, before/after, storm tips) — use your 39GB media. - [] Add fresh photos weekly (Google ranks active profiles higher). Geotag to Frisco/Lewisville. - [] Seed + answer 5–10 Q&A entries (claim process, warranty, areas served). - [] Keep review velocity up (the Lead Engine loop) AND reply to every review. - [] If Frisco (1 Cowboys Way) is a real staffed location, consider a separate GBP for it (more Maps coverage). Don't fake locations — Google penalizes it.

2. GOOGLE LSA (you said it's live + getting leads)

Checklist in your LSA dashboard: - [] **Google Guaranteed badge active** (background check + insurance verified). - [] Categories = Roofing; service area = Frisco + Collin + Denton counties. - [] Reviews syncing from GBP (your 209 reviews are a huge LSA-rank advantage — make sure they show). - [] **Respond to every lead < 5 min** and mark booked/won in LSA — response rate + bookings raise your rank and lower cost-per-lead. - [] **Dispute bad-fit leads** (wrong service, spam, out-of-area) for credits — most people skip this and overpay. - [] Set a weekly budget cap; review cost-per-lead each Monday (Attribution tab).

3. SEO / GEO (be the answer AI search gives)

Your site structure is good. Gaps to close: - [] **GEO/AI-search:** add FAQ schema + answer the question in the first 40 words on each service/area page (so ChatGPT/Google AI Overviews cite you). - [] **Blog cadence:** 2 posts/month on local storm + claim topics (NotebookLM research → draft → post). - [] **NAP consistency:** fix the phone everywhere (see Fix #1) across GBP, BBB, Yelp, Facebook, site. - [] **Reviews → SEO:** embed recent Google reviews on service-area pages (fresh keyword-rich content).

4. SOCIAL (you already have the accounts)

Live: Facebook, Instagram, LinkedIn, YouTube, TikTok (@pineappleroofing). The gap is **consistency**, not presence. - Cadence: 3–4 posts/week per platform, rotating Sale / Culture / Recruit (your asset library already has these — cleaned in the new CRM). - **Personal brand (founder/Saia):** founder + heritage content outperforms brand pages. Cross-post the "six-sibling family, Polynesian values" story from your personal accounts to amplify trust. - Repurpose with Paperclip: 1 source video → many platform cuts.

5. THE 39GB MEDIA — turn it into leads (it's wasted sitting there)

This is your unfair advantage — real drone + before/after + testimonial footage. Plan: 1. **Organize** into `02_Media_Vault/` by type: `Drone/` , `BeforeAfter/` , `Testimonials/` , `Team_Culture/` . 2. **Triage weekly**: pick the 5 best clips/photos. Don't try to use all 39GB at once. 3. **Deploy each piece 4 ways**: GBP photo post → Reel/TikTok → YouTube Short → ad creative (50/5/3). 4. **Testimonials are priority** — pair your 209 reviews with face/video testimonials; nothing converts roofing better.

I can build `m7_media_index.py` to catalog the whole 39GB folder (type, count, size, suggested use) so you stop guessing what you have. Just tell me the folder path.

TOP 5 — DO THESE FIRST (ignore the rest until done)

1. Pick ONE phone number; I fix all M7 files.
2. Turn on the review-request loop (Lead Engine) — protect the 5.0★ lead.
3. LSA: respond <5 min + dispute bad leads weekly.
4. GBP: 2 posts + fresh photos/week from your media.
5. Log every lead in the new CRM `Google_LSA_Leads` tab.

Ko e hala 'o e fononga ko e faka'apa'apa.

PART 10 — M7_HERMES_START_HERE.md

☐ HERMES — START HERE (you're new, this is everything)

Breathe. You have 3 windows open. Here's what each one is and what to do. You only ever *type* into ONE of them (Hermes). The others just run in the background.

THE 3 WINDOWS (what they are)

Window	What it is	What you do
M7 Engine (says "ENGINE ACTIVE / localhost:3000")	the dashboard server	leave it open, don't touch
M7 Brand Firewall (says "watching 6 Fala rooms")	the compliance guard	leave it open, don't touch
Hermes Agent (the gold "HERMES-AGENT" window)	your AI worker	this is where you type

If you ever see a red `EADDRINUSE :3000` error → the Engine is already running in another window. Just close the error window. Never start the Engine twice.

WHAT IS HERMES (in one line)

A worker that reads your vault, edits files, runs your scripts, and schedules tasks. You tell it a goal in plain English in the box that says "**What should we tackle?**" — it does the work. **It never publishes ads or sends texts on its own. Everything it makes waits for you in `Outbox_Drafts` .**

► YOUR FIRST 3 HERMES TASKS (copy-paste, in order)

Type these one at a time into the Hermes box. Wait for each to finish.

Task 1 — let Hermes learn your business (do this first, once):

Read these files and remember them as my operating rules for everything you do:
01_Command_Center/GROUNDING.md, MASTER_PLAYBOOK.md, M7_LEAD_ENGINE.md, M7_GROWTH_ENGINE.md.
Then give me a 5-bullet summary of what my business is and your rules. Do not change any files.

Task 2 — your first real win (review requests):

Read 01_Command_Center/M7_LEAD_ENGINE.md. Using the review-request text in it, write 3 sample review-request messages (use placeholder names) and save them to 01_Command_Center/Outbox_Drafts/ as PAUSED drafts. Do not send anything. Then list what you created.

→ Open the files it made, read them, and that's your template to text real customers.

Task 3 — have Hermes write your 30-day gameplan:

Based on 01_Command_Center/MASTER_PLAYBOOK.md, M7_GROWTH_ENGINE.md, M7_LEAD_ENGINE.md, and M7_CONTENT_FACTORY.md, write me a simple 30-day marketing gameplan for Pineapple Contractors (roofing). One focus per week, 3 daily actions max, written for someone with ADHD. Save it to 01_Command_Center/Outbox_Drafts/30_Day_Gameplan.md. Keep every rule (CPPA not free, no green, ad spend stays manual).

THE BATCH FILES (when to double-click each)

You rarely need these. Here's the whole list: | File | When | | :--- | :--- | | RUN_M7_DASHBOARD.bat | start of a work session (opens Engine + dashboard) — only if not already running | | HERMES_COMMAND_CENTER.bat | to start Hermes + everything together | | INGEST_AND_INDEX.bat | after you drop files into skills_inbox | | REGISTER_DAILY_SYNC.bat | ONCE — turns on the daily auto-update | | M7_TIDY.bat | if the folder looks messy |

THE DASHBOARD (localhost:3000)

Open a browser → <http://localhost:3000>. It shows your AI fleet, the avatars, and a task runner. You don't have to use it — it's the visual view. Hermes + the Outbox folder are what matter.

□ YOUR 30-DAY PLAN (simple, one focus per week)

Week 1 — Foundation (don't skip): - Run Hermes Tasks 1-3 above. - Fix the website + GBP: "free" → "Complimentary Professional Photo Audit," phone 972-928-0788 everywhere. - Turn on LSA lead alerts to your phone. Reply to every lead in 5 minutes.

Week 2 — Reviews engine: - Start texting every finished customer for a Google review (use the Task 2 template). - Log every lead in the CRM [Google_LSA_Leads](#) tab. - Pick 1 testimonial clip from your media → post it (GBP + Reel).

Week 3 — First ad: - Review the Storm Launch campaign in [Outbox_Drafts](#). Launch the Local Fan ad set (\$250/week) in Meta. - 2 GBP posts + fresh photos from your media.

Week 4 — Track + double down: - Run the weekly review (which source booked the most JOBS). Put next budget on the winner. - 5 media clips → ads (Content Factory). Keep the review texts going.

□ IF YOU FEEL LOST

Do ONLY this: (1) answer LSA leads in 5 min, (2) text finished customers for a review, (3) ask Hermes one task from above. That's the whole business. Everything else is bonus.

Ko e hala 'o e fononga ko e faka'apa'apa.
