

Enterprise OS, on one page

1 AWS account	1 chokepoint	~31 tables	6 buckets	3 KMS keys	42 kill switches	9 leak patterns	15 CDK stacks
-------------------------	------------------------	----------------------	---------------------	----------------------	----------------------------	---------------------------	-------------------------

One account. One chokepoint. Your own keys. A write-once audit trail. Any model through Bedrock, and the prompt never leaves. The off-the-shelf agent, rebuilt as a secure substitute for every service, on infrastructure you already trust.
