

GOOGLE WORKSPACE CLI

Hook Script + Demo Prompts

This PDF contains the final hook script, a video structure reference, and 6 copy-paste demo prompts for Claude Code + gws. All prompts are **privacy-safe** — no personal data, names, or identifying information.

Contents

01	The Hook — final script	02	Video Structure at a Glance
03	Demo 1 — Email Triage Assistant	04	Demo 2 — Weekly Business Report
05	Demo 3 — Meeting Prep Brief	06	Demo 4 — Follow-Up Automation
07	Demo 5 — Daily Standup Generator	08	Demo 6 — Drive Cleanup Audit
09	Battle-Testing Checklist		

1. The Hook

Final version — read this straight to camera. ~25 seconds.

If you use Gmail, Google Calendar, or Google Drive —
I'm about to show you a powerful free tool you can add to
your arsenal
that's going to take your productivity and your AI agents to
the next level.

Google just handed you a golden key.

It's called the Google Workspace CLI, and it's the first time
you can give your AI
direct access to your entire Google account.

Not through Zapier. Not through n8n.

Not through any tool you've been paying \$49 a month for.

Directly. For free.

In this video I'll show you what it is, how to set it up in under
two minutes,
and how to combine it with Claude Code to automate
workflows
that you've been wishing no-code tools could do — but
never quite could.

Let's get into it.

Pause slightly after Drive. Let it land.

[Pause. Let this breathe. 1 full second.]

[Slight emphasis on \$49]

[Pause. Big pause.]

[Look straight at camera. Confident.]

2. Video Structure at a Glance

12–15 min target. Three demos in Acts 3–5.

Time	Section	What Happens
0:00–1:30	HOOK	Show demo running → reveal gws → Let's go
1:30–4:00	ACT 1: What Is a CLI?	Terminal → CLI → API → Google Apps. Excalidraw diagram.
4:00–6:00	ACT 2: Why gws beats Zapier	Old Way vs New Way diagram. \$0 vs \$49/mo.
6:00–8:30	ACT 3: Demo 1 — Email Triage	Read emails → categorize → create Google Sheet
8:30–11:00	ACT 4: Demo 2 — Weekly Report	Calendar + emails → auto-generate Slides deck
11:00–12:30	ACT 5: Demo 3 — Meeting Prep	Next meeting → briefing doc in Google Docs
12:30–14:30	ACT 6: What Else It Can Do	GitHub → install → 101 skills overview
14:30–15:00	OUTRO	Community link → subscribe → next video tease

3. Demo 1 — Email Triage Assistant

RECOMMENDED — Use in video

Visual: Google Sheet | Time: ~45 seconds | Impact: HIGH

gws commands used

copy & paste

```
$ gws gmail users messages list
$ gws gmail users messages get
$ gws sheets spreadsheets create
$ gws sheets spreadsheets values append
```

Prompt — copy and paste this to Claude Code or your AI agent

copy & paste

```
Read my last 20 Gmail messages. For each one, read the subject, sender,
and first 200 characters of the body. Categorize each email as one of:
[Action Required], [Reply Needed], [FYI Only], [Ignore]. Then create a new
Google Sheet called 'Inbox Triage - [today's date]' with these columns:
Sender Name, Sender Email, Subject, Category, One-Line Summary, Priority
(1=urgent, 2=normal, 3=low). Use your judgment to assign priority based on
subject line and sender. Sort by Priority ascending. Return the link to
the sheet when done.
```

Backup prompt (simpler — use if main prompt fails)

copy & paste

```
List my last 10 unread Gmail messages. For each one, show: sender,
subject, and a one-sentence summary of what it's about. Then tell me which
3 are most urgent and why.
```

Filming notes

- The gws commands appear in the terminal in real time — keep this on screen
- Open the resulting Sheet live — it should be a clean, sorted table
- Blur any real email addresses before publishing

4. Demo 2 — Weekly Business Report

RECOMMENDED — Use in video

Visual: Google Slides deck | Time: ~60-90 seconds | Impact: VERY HIGH

gws commands used

copy & paste

```
$ gws calendar events list
$ gws gmail users messages list
$ gws slides presentations create
```

Prompt — copy and paste this to Claude Code or your AI agent

copy & paste

```
Pull my Google Calendar events from this week (Monday to today). Count:
total number of meetings, total hours in meetings, and which 3 people or
groups I met with most. Then look at my last 30 emails and count how many
came from each email domain — give me the top 5 sender domains. Create a
Google Slides presentation called 'Weekly Report — [week dates]' with:
Slide 1 (title slide), Slide 2 (my meeting stats this week with the
numbers), Slide 3 (top email senders by domain), Slide 4 (one section
called 'Next Week Focus' — leave 3 blank bullet points for me to fill in).
Return the link to the presentation.
```

Filming notes

- AI runs multiple gws commands sequentially — show the full sequence
- Open the Slides live — should look like a real weekly report
- Domain-level email stats don't expose individual names or content

5. Demo 3 — Meeting Prep Brief

RECOMMENDED — Use in video

Visual: Google Doc | Time: ~30-45 seconds | Impact: HIGH

gws commands used

copy & paste

```
$ gws calendar events list
$ gws gmail users messages list
$ gws docs documents create
```

Prompt — copy and paste this to Claude Code or your AI agent

copy & paste

```
Find my next calendar event that has at least one other attendee. Get the names and email addresses of all attendees. Search my Gmail for any emails I've sent or received from those people in the last 14 days. Create a Google Doc called 'Meeting Brief — [event name]' with these sections: Meeting Details (title, time, attendees), Email Context (key topics from recent emails with each person — no raw email content, just themes and topics), Suggested Agenda (3-5 bullet points based on email history), Open Items (any unresolved questions from our emails). Return the link to the doc.
```

Filming notes

- Blur attendee email addresses on screen before publishing
- The 'email context' section shows topics only — not raw message content
- This one feels most like having an EA — let it run without narrating

6. Demo 4 — Follow-Up Automation

STRONG B-ROLL

Visual: Gmail drafts + Google Sheet | Time: ~60 seconds | Impact: HIGH

gws commands used

copy & paste

```
$ gws gmail users messages list
$ gws gmail users drafts create
$ gws sheets spreadsheets create
$ gws sheets spreadsheets values append
```

Prompt — copy and paste this to Claude Code or your AI agent

copy & paste

```
Search my Gmail for email threads where the subject contains 'proposal',
'quote', 'invoice', or 'contract' from the last 30 days. For each thread,
check if I sent the last email. If I did, and it was more than 5 days ago,
save a draft follow-up (do NOT send it – save as draft only): 'Hi [first
name], just circling back on [subject]. Happy to answer any questions –
let me know where you're at.' Create a Google Sheet called 'Follow-Up
Tracker' with columns: Contact Name, Thread Subject, Days Since My Last
Email, Draft Created (Yes/No). Return the sheet link.
```

Filming notes

- IMPORTANT: Emphasise 'save as draft — NOT send' on screen for trust
- Remove the Contact Email column from the tracker before filming
- This demo alone justifies the whole video for any sales/freelance audience

7. Demo 5 — Daily Standup Generator

QUICK WIN

Visual: Formatted email | Time: ~20 seconds | Impact: MEDIUM

gws commands used

copy & paste

```
$ gws calendar events list
$ gws gmail users messages list
$ gws gmail users messages send
```

Prompt — copy and paste this to Claude Code or your AI agent

copy & paste

```
Get my calendar events from today. Get the last 5 emails I sent today.
Based on these, generate a standup report in this format:
What I did: [bullet points from calendar + emails]
What's coming up: [remaining calendar events today/tomorrow]
Any blockers: [infer from emails if anything looks stuck]
Then send this as an email to [your email address] with subject 'Daily
Standup — [today's date]'. Confirm when sent.
```

Filming notes

- Replace [your email address] with your own email before running
- Blurs well — only your own inbox involved
- Use this as a quick 20-second demo between the bigger ones

8. Demo 6 — Drive Cleanup Audit

GREAT VISUAL

Visual: Google Sheet file inventory | Time: ~30 seconds | Impact: MEDIUM

gws commands used

copy & paste

```
$ gws drive files list
$ gws sheets spreadsheets create
$ gws sheets spreadsheets values append
```

Prompt — copy and paste this to Claude Code or your AI agent

copy & paste

```
Search my Google Drive for files that have 'draft', 'old', 'copy',
'backup', 'v1', 'v2', or 'v3' in the filename. For each file found, get:
file name, file type, last modified date, file size. Create a Google Sheet
called 'Drive Audit — [today's date]' with all these details. Sort by last
modified date (oldest first). Return the sheet link.
```

Filming notes

- Removed shareable links from output — no URLs exposed on screen
- File names are generally safe — just blur anything confidential
- Relatable for everyone — everyone has old draft files

9. Battle-Testing Checklist

Run through this before you film. Don't skip it.

Step 1 — Check your auth scopes

copy & paste

```
gws auth whoami
```

If Calendar, Drive, or Sheets is missing, re-auth with all scopes:

copy & paste

```
gws auth login -s calendar,drive,gmail,sheets,docs,slides
```

Step 2 — Make sure Claude actually uses gws

Add this to your Claude Code system prompt before filming:

copy & paste

```
You have access to the gws CLI tool.  
Use it to interact with Google Workspace.  
Run gws commands in your terminal when the user asks for Google Workspace  
tasks.
```

Step 3 — Verify you have enough data

Demo	What You Need
Demo 1 (Email Triage)	20+ emails in your inbox, including some unread
Demo 2 (Weekly Report)	At least 3 calendar events this week
Demo 3 (Meeting Prep)	At least 1 upcoming meeting with attendees
Demo 4 (Follow-Up)	At least 1 email thread with 'proposal' or 'quote' in subject
Demo 5 (Standup)	A few calendar events or sent emails today

Demo 6 (Drive Audit)	Some old files with 'draft', 'copy', or 'v1' in the name
-----------------------------	--

Filming setup

- Split screen: terminal on left, Google app on right
- Zoom into the terminal when a key gws command runs
- Slow zoom into the final output (Sheet / Doc / Slides)
- Don't cut the 'thinking time' — it proves it's real
- Narrate what's happening: 'Watch — it's now creating the spreadsheet...'
- Blur any real names, emails, or sensitive file names before publishing
