

PINEAPPLE CONTRACTORS M7 — DEPLOYMENT PACKAGE

What's In This Package

```
m7_deploy/
├── setup_m7.ps1           ← Run FIRST (PowerShell, as Admin)
├── README.md             ← This file
├──
├── 03_Knowledge_Mat/
│   └── GROUNDING.md       ← Brand constitution (copy to vault roo
├──
├── 04_Tech_Lab/
│   └── scripts/
│       └── brand_firewall.py ← Pre-commit compliance scanner
├──
├── config_templates/
│   ├── claudes_desktop_config.json ← %APPDATA%\Claude\claudes_desktop_confi
│   ├── claudes_code_config.json    ← ~/.claudes.json
│   ├── gemini_settings.json        ← ~/.gemini/settings.json
│   ├── hermes_env                  ← ~/.hermes/.env
│   └── hermes_config.yaml          ← ~/.hermes/config.yaml
├──
└── 01_Command_Center/
    └── OS_Dashboard.html           ← Mission Control (open in browser)
```

Deployment Sequence

Step 1: Run the Bootstrap

```
# Open PowerShell as Administrator
Set-ExecutionPolicy -Scope Process -ExecutionPolicy Bypass
.\setup_m7.ps1
```

This creates all directories, MEMORY.md, USER.md, and runs pre-flight checks.

Step 2: Copy Files to Vault

```
$vault = "C:\Pineapple Contractors M7"

# Brand constitution → two locations
Copy-Item "03_Knowledge_Mat\GROUNDING.md" "$vault\03_Knowledge_Mat\"
Copy-Item "03_Knowledge_Mat\GROUNDING.md" "$vault\GROUNDING.md"

# Brand firewall script
Copy-Item "04_Tech_Lab\scripts\brand_firewall.py" "$vault\04_Tech_Lab\scripts\"

# Dashboard
Copy-Item "01_Command_Center\OS_Dashboard.html" "$vault\01_Command_Center\"
```

Step 3: Fill In API Keys

Edit `config_templates/hermes_env` — replace all `your_*_key_here` placeholders.

Step 4: Deploy Config Files

```
# Claude Desktop
Copy-Item "config_templates\claude_desktop_config.json" "$env:APPDATA\Claude\clau

# Claude Code CLI
Copy-Item "config_templates\claude_code_config.json" "$HOME\.claude.json"

# Gemini / Antigravity CLI
$geminiDir = "$HOME\.gemini"
if (-not (Test-Path $geminiDir)) { mkdir $geminiDir }
Copy-Item "config_templates\gemini_settings.json" "$geminiDir\settings.json"

# Hermes
$hermesDir = "$HOME\.hermes"
if (-not (Test-Path $hermesDir)) { mkdir $hermesDir }
Copy-Item "config_templates\hermes_env" "$hermesDir\.env"
Copy-Item "config_templates\hermes_config.yaml" "$hermesDir\config.yaml"
```

Step 5: Install Ollama + Pull Model

```
# After installing Ollama from ollama.com:
ollama pull qwen2.5-coder:14b      # 32GB+ RAM
# OR
ollama pull gemma2                # 16GB RAM
```

Step 6: Test Brand Firewall

```
cd "C:\Pineapple Contractors M7"
python 04_Tech_Lab\scripts\brand_firewall.py --path "02_Workspaces"
```

Step 7: Verify Dashboard

Open 01_Command_Center\OS_Dashboard.html in your browser. All system tiles should render in Royal Navy + Pineapple Gold.

Quick Reference

Service	Port	Status Check
M7 Dashboard	3737	http://localhost:3737
Paperclip AI	3100	http://localhost:3100
Ollama	11434	ollama list
OpenClaw	(daemon)	Dashboard status badge

Config File	Location
Claude Desktop	%APPDATA%\Claude\claude_desktop_config.json
Claude Code	~/.claude.json
Antigravity	~/.gemini/settings.json
Hermes env	~/.hermes/.env
Hermes config	~/.hermes/config.yaml
